New Kernsville Dam Removal Project
Tilden and Windsor Townships
Berks County, PA

New Kernsville Dam Removal Project
Project No. D06-434-101.1
Township of Tilden, Township of Windsor,
and Borough of Hamburg
Berks County, PA

Hydrology and Hydraulics Summary

Introduction

The Department of Environmental Protection (DEP) is proposing a project to remove the New Kernsville Dam which is located along the Schuylkill River in Tilden and Windsor Townships, Berks County, and is situated between Port Clinton and Hamburg, Pennsylvania. The dam replaced a preexisting dam, The Kernsville Dam, which was located approximately 1,500 feet downstream of the current New Kernsville Dam. The dam was constructed as a result of the Pennsylvania Act 441, “Schuylkill River Desilting Project” and is one of many dams along the Schuylkill River constructed to form desilting basins. The dam was designed by Justin & Courtney, Philadelphia, Pennsylvania and was constructed by Poitier & McLane Corporation. The construction of the concrete gravity dam was started in June of 1948 and completed in November of 1949 by the Department of Forest and Waters, now known as the Department of Environmental Protection for the purpose of creating an impounding reservoir to capture and prevent the downstream advancement of coal-rich silt carried by the Schuylkill River. The dam is classified as an Intermediate Size (Class B), High Hazard (Category 1) facility. Therefore, the dam has the potential for extensive property damage and possible loss of life along the Schuylkill River in the event of a failure.

The dam consists of a central 600 feet of concrete gravity ogee spillway with non-overflow sections at each end. On one end of the spillway is a concrete gravity wall which extends approximately 100 feet into an earth embankment. The end of the earth embankment extends approximately 340 feet beyond the end of the spillway to high ground. On the opposite end of the spillway there is also a concrete gravity wall extending approximately 100 feet into high ground. The concrete ogee gravity type spillway has a base width of 58'-7" and a height above the foundation of 45'. The crest of the spillway is 18' above the stream bed with the remaining 27' below the stream bed.

Currently, the New Kernsville Dam is being operated and maintained by the Bureau of Abandoned Mine Reclamation (BAMR). The Commonwealth owns the dam structure and the surrounding property. Unfortunately, trespassing and inappropriate activities in the area have occurred resulting in numerous fatalities. As a result, the dam and surrounding area has been closed to the public. Reading, Blue Mountain, and Northern Railroad Co. also owns property in the area and has requested that the dam be removed to eliminate the hazard. The dam surpassed its useful life as there is no longer a need to capture coal silts due to the various mine reclamation activities completed within the Schuylkill River watershed. Removal of the dam would also likely revert the property back to public use and would also allow fish passage. The BAMR would like to turn the property over to the Department of Conservation and Natural Resources

(DCNR) or the local municipality so the area can be developed for controlled public use after the dam is removed.

Hydrology

The Flood Insurance Study for Berks County (No. 42011CV001B, Volume 1 of 4, Effective Date: March 21, 2017) defines the peak discharge for the 1% Annual-Chance Flood or the base flood as 42,800 CFS from upstream of the confluence of Maiden Creek to downstream of the confluence with Little Schuylkill River. See attached Table 5 Summary of Discharges for the Schuylkill River. As a result, all hydraulic models for this summary will use the FEMA FIS 100-year flow of 42,800 CFS.

Hydraulics

The Pennsylvania Department of Transportation, Design Manual, Part 2, Highway Design, Publication 13M, Chapter 10, Appendix C was referenced to determine the hydraulic modeling requirements. This document is a joint guidance issued by PennDOT and PA DEP regarding hydraulic modeling requirements for PennDOT H&H Reports when a project is in a FEMA regulated area. Referring to the chart on page 10C-1, the project is located within a detailed FEMA study area with a FEMA regulatory floodway. The dam removal project will include partially removing the concrete spillway and abutments and spoiling the removed concrete directly downstream of the right side of the dam. Therefore, the project will include placing fill within the floodway. According to the chart, if the anticipated increase in 100-year WSE is equal to or less than zero, section 1.b must be followed for modeling requirements. It is anticipated that the difference between the existing WSE and the proposed WSE will be less than zero, therefore, section 1.b will be referenced for modeling requirements.

- **FEMA FIS Effective Models**

DEP requested Category 1 hydraulics data from the FEMA Engineering Library and received input and output data files which included runs at six different locations along the Schuylkill River in Berks County. The models were created using HEC-2 Version 4.6.2, May 1991, produced by the U.S. Army Corps of Engineers. According to the Flood Insurance Study, the hydrologic and hydraulic analysis for Tilden and Windsor Townships were completed in June of 1978 and September of 1979, respectively, and was prepared by the USGS under an inter-Agency Agreement. The Hydraulic Analysis was updated in 1996 by FEMA's consultant Michael Baker International.

- **DEP Duplicate Effective Model**

The HEC-2 input data was manually entered into HEC-RAS River Analysis System Version 5.0.3, September 2016, produced by the U.S. Army Corps of Engineers to develop the Duplicate Effective Model. All geometry, bank station locations, manning's n values, reach lengths, contraction & expansion values, boundary conditions, flow data, etc. was transferred from the HEC-2 input data into HEC-RAS.

The HEC-2 input data was transferred into HEC-RAS with the most upstream cross section located approximately 350 feet upstream of the Rt. 61 Bridge or approximately 1.28 miles upstream of the dam as this is sufficiently upstream of the backwater conditions created by the New Kernsville Dam. When comparing the base flood elevations of the HEC-2 Effective Model and the HEC-RAS Duplicate Effective Model, the output showed very minor differences. The majority of the HEC-RAS Duplicate Effective run is within 0.01 feet of the HEC-2 Effective run water surface elevations. The two cross sections directly upstream of the dam crest resulted in the greatest difference. The greatest difference of the two cross sections (HEC-2 No. 522,990/HEC-RAS No. 43) resulted in a difference of 0.06 feet or $\frac{3}{4}$ inch which is insignificant. The two runs model the dam as a bridge with no opening below the low chord. This forces all flow over the “roadway” as weir flow to replicate the conditions of a dam. The difference in the modeling between the two programs may have caused the differences in the water surface elevations.

- DEP Proposed Model

The Proposed Model was developed by copying the Duplicate Effective model and making the necessary changes to the geometry data to represent the removal of the dam. To represent the removal of the dam, the bridge which was used to model the dam was removed from the model. Also, the two cross sections immediately upstream of the dam (HEC-RAS Nos. 42 and 43) were removed from the model as these cross sections modeled the upstream side of the dam.

- DEP Duplicate Effective Model / DEP Proposed Model

When comparing the water surface elevations of the Duplicate Effective Model and the Proposed model, the removal of the dam decreased the water surface elevation by 0.85 feet or 10 inches starting approximately 4,600 feet upstream of the dam. The water surface elevation just upstream of the dam decreased by 9.72' or 9'-9". There was no difference between the water surface elevations downstream of the dam. A discrepancy was revealed at River Station 49 which shows an increase in water surface elevation of 0.12 feet or 1 $\frac{1}{2}$ inches. The channel narrows considerably at this location compared to the adjacent cross sections. According to the summary of errors, additional cross sections may be needed at this location to obtain more accurate results.

- DEP Corrected Effective Model

The Corrected Effective Model was developed by copying the Duplicate Effective Model and adding additional cross sections upstream and downstream of River Station 49. The additional cross sections were interpolated automatically by the program. Cross sections were added so there is approximately 100 feet between each cross section. This resulted in four additional interpolated cross sections between River Stations 50 and 49 and eight additional interpolated cross sections between River Stations 49 and 48.

- DEP Duplicate Effective Model / DEP Corrected Effective Model

The addition of the interpolated cross sections increased the water surface elevation at River Station 49 by 0.24 feet or 3 inches. Slight increases upstream of River Station 49 occurred ranging from 0.08 feet to 0.12 feet. All cross sections downstream of River Station 49 resulted in no change in water surface elevations.

- DEP Corrected Proposed Model

The Corrected Proposed Model was developed by copying the Proposed Model and adding the same interpolated cross sections that were added in the Corrective Effective Model. Essentially, the model is the Corrected Effective Model without the modeling of the dam.

- DEP Corrected Effective Model / DEP Corrected Proposed Model

The results show the water surface elevations gradually decreasing in the direction of flow. This is to be expected with the removal of a dam. The water surface decreases from 0.02 feet at the upstream end to 9.72 feet at the dam. The cross sections downstream of the dam experience no change in water surface elevation.

Conclusion

It was determined from the Duplicate Effective model that the more modern hydraulic analysis HEC-RAS program provided slightly different results immediately upstream of the dam compared to the HEC-2 FEMA Effective model. The output data for both showed very little differences at the upstream and downstream ends which assured the HEC-2 input data was transferred into HEC-RAS correctly. The Duplicate Effective model was modified to represent the removal of the dam. When comparing the Duplicate Effective model to the Proposed Model (model without the dam), an increase in water surface elevation is encountered near the upstream limit of the study. Interpolation of cross sections near this location was used to add additional cross sections to produce more accurate results. When comparing the Corrected Effective model (Duplicate Effective Model with additional interpolated cross sections) to the Corrected Proposed Model (Proposed Model with additional interpolated cross sections), the existing water surface elevations remained the same below the dam and decreased significantly (-9.72' maximum) immediately upstream of the dam. The results showed a decrease in water surface elevation as expected with removal of the obstruction. Therefore, there is no increase in the base flood elevations and a CLOMR/LOMR is not required.

PROJECT DATA

Project Title: New Kernsville Dam
Project File : NewKernsvilleDam.prj
Run Date and Time: 5/8/2018 8:44:56 AM

Project in English units

Project Description:
New Kernsville Dam Removal
D06-434
Tilden and Windsor Townships
Berks
County, PA

Schuylkill River FEMA FIS Flows from Downstream of Little
Schuylkill River to Upstream of Maiden Creek

10-Year = 23,200 CFS
50-Year
=36,300 CFS
100-Year = 42,800 CFS
500-Year = 60,200 CFS

PLAN DATA

Plan Title: Duplicate Effective Run
Plan File : P:\Devel\PROJECT FILES\+MISCELLANEOUS ITEMS\06-434 New Kernsville Dam\Hydrology & Hydraulics\CLOMR Review\HEC-RAS\NewKernsvilleDam.p01

Geometry Title: Duplicate Effective Model
Geometry File : P:\Devel\PROJECT FILES\+MISCELLANEOUS ITEMS\06-434 New Kernsville Dam\Hydrology & Hydraulics\CLOMR Review\HEC-RAS\NewKernsvilleDam.g01

Flow Title : FEMA Flow

NewKernsvilleDam.rep

Flow File : P:\Devel\PROJECT FILES\+MISCELLANEOUS ITEMS\D06-434 New Kernsville Dam\Hydrology & Hydraulics\CLOMR Review\HEC-RAS\NewKernsvilleDam.f01

Plan Summary Information:

Number of: Cross Sections = 18 Multiple Openings = 0
 Culverts = 0 Inline Structures = 0
 Bridges = 1 Lateral Structures = 0

Computational Information

Water surface calculation tolerance = 0.01
Critical depth calculation tolerance = 0.01
Maximum number of iterations = 20
Maximum difference tolerance = 0.3
Flow tolerance factor = 0.001

Computation Options

Critical depth computed only where necessary
Conveyance Calculation Method: Between every coordinate point (HEC2 Style)
Friction Slope Method: Average Conveyance
Computational Flow Regime: Subcritical Flow

FLOW DATA

Flow Title: FEMA Flow

Flow File : P:\Devel\PROJECT FILES\+MISCELLANEOUS ITEMS\D06-434 New Kernsville Dam\Hydrology & Hydraulics\CLOMR Review\HEC-RAS\NewKernsvilleDam.f01

ERRORS WARNINGS AND NOTES

Errors Warnings and Notes for Plan : Duplicate Ef

River: Schuylkill River Reach: Reach 1 RS: 53 Profile: 500-Year

Warning:Divided flow computed for this cross-section.

River: Schuylkill River Reach: Reach 1 RS: 51 Profile: 50-Year

Warning:The velocity head has changed by more than 0.5 ft (0.15 m). This may indicate the need for additional cross sections.

River: Schuylkill River Reach: Reach 1 RS: 51 Profile: 100-Year

Warning:The velocity head has changed by more than 0.5 ft (0.15 m). This may indicate the need for additional cross sections.

River: Schuylkill River Reach: Reach 1 RS: 51 Profile: 500-Year

Warning:The velocity head has changed by more than 0.5 ft (0.15 m). This may indicate the need for additional cross sections.

River: Schuylkill River Reach: Reach 1 RS: 50 Profile: 10-Year

Warning:The velocity head has changed by more than 0.5 ft (0.15 m). This may indicate the need for additional cross sections.

Warning:The energy loss was greater than 1.0 ft (0.3 m). between the current and previous cross section. This may indicate the need for additional cross sections.

River: Schuylkill River Reach: Reach 1 RS: 50 Profile: 50-Year

Warning:The velocity head has changed by more than 0.5 ft (0.15 m). This may indicate the need for additional cross sections.

Warning:The energy loss was greater than 1.0 ft (0.3 m). between the current and previous cross section. This may indicate the need for additional cross sections.

River: Schuylkill River Reach: Reach 1 RS: 50 Profile: 100-Year

Warning:The velocity head has changed by more than 0.5 ft (0.15 m). This may indicate the need for additional cross sections.

Warning:The energy loss was greater than 1.0 ft (0.3 m). between the current and previous cross section. This may indicate the need for additional cross sections.

River: Schuylkill River Reach: Reach 1 RS: 50 Profile: 500-Year

Warning:The velocity head has changed by more than 0.5 ft (0.15 m). This may indicate the need for additional cross sections.

Warning:The energy loss was greater than 1.0 ft (0.3 m). between the current and previous cross section. This may indicate the need for additional cross sections.

River: Schuylkill River Reach: Reach 1 RS: 49 Profile: 10-Year

Warning:The energy loss was greater than 1.0 ft (0.3 m). between the current and previous cross section. This may indicate

the need for additional cross sections.

River: Schuylkill River Reach: Reach 1 RS: 49 Profile: 50-Year

Warning:The energy loss was greater than 1.0 ft (0.3 m). between the current and previous cross section. This may indicate

the need for additional cross sections.

River: Schuylkill River Reach: Reach 1 RS: 49 Profile: 100-Year

Warning:The energy loss was greater than 1.0 ft (0.3 m). between the current and previous cross section. This may indicate

the need for additional cross sections.

River: Schuylkill River Reach: Reach 1 RS: 49 Profile: 500-Year

Warning:The velocity head has changed by more than 0.5 ft (0.15 m). This may indicate the need for additional cross sections.

Warning:The energy loss was greater than 1.0 ft (0.3 m). between the current and previous cross section. This may indicate

the need for additional cross sections.

River: Schuylkill River Reach: Reach 1 RS: 48 Profile: 10-Year

Warning:The velocity head has changed by more than 0.5 ft (0.15 m). This may indicate the need for additional cross sections.

Warning:The conveyance ratio (upstream conveyance divided by downstream conveyance) is less than 0.7 or greater than 1.4.

This may indicate the need for additional cross sections.

Warning:The energy loss was greater than 1.0 ft (0.3 m). between the current and previous cross section. This may indicate

the need for additional cross sections.

River: Schuylkill River Reach: Reach 1 RS: 48 Profile: 50-Year

Warning:The velocity head has changed by more than 0.5 ft (0.15 m). This may indicate the need for additional cross sections.

Warning:The conveyance ratio (upstream conveyance divided by downstream conveyance) is less than 0.7 or greater than 1.4.

This may indicate the need for additional cross sections.

Warning:The energy loss was greater than 1.0 ft (0.3 m). between the current and previous cross section. This may indicate

the need for additional cross sections.

River: Schuylkill River Reach: Reach 1 RS: 48 Profile: 100-Year

Warning:The velocity head has changed by more than 0.5 ft (0.15 m). This may indicate the need for additional cross sections.

Warning:The conveyance ratio (upstream conveyance divided by downstream conveyance) is less than 0.7 or greater than 1.4.

This may indicate the need for additional cross sections.

Warning:The energy loss was greater than 1.0 ft (0.3 m). between the current and previous cross section. This may indicate

the need for additional cross sections.

River: Schuylkill River Reach: Reach 1 RS: 48 Profile: 500-Year

Warning:The velocity head has changed by more than 0.5 ft (0.15 m). This may indicate the need for additional cross sections.

Warning:The energy loss was greater than 1.0 ft (0.3 m). between the current and previous cross section. This may indicate

the need for additional cross sections.

River: Schuylkill River Reach: Reach 1 RS: 47 Profile: 50-Year

Warning:The velocity head has changed by more than 0.5 ft (0.15 m). This may indicate the need for additional cross sections.

Warning:The energy loss was greater than 1.0 ft (0.3 m). between the current and previous cross section. This may indicate

the need for additional cross sections.

River: Schuylkill River Reach: Reach 1 RS: 47 Profile: 100-Year

Warning:The velocity head has changed by more than 0.5 ft (0.15 m). This may indicate the need for additional cross sections.

Warning:The energy loss was greater than 1.0 ft (0.3 m). between the current and previous cross section. This may indicate

the need for additional cross sections.

River: Schuylkill River Reach: Reach 1 RS: 47 Profile: 500-Year

Warning:The velocity head has changed by more than 0.5 ft (0.15 m). This may indicate the need for additional cross sections.

Warning:The energy loss was greater than 1.0 ft (0.3 m). between the current and previous cross section. This may indicate

the need for additional cross sections.

River: Schuylkill River Reach: Reach 1 RS: 46 Profile: 10-Year

Warning:The conveyance ratio (upstream conveyance divided by downstream conveyance) is less than 0.7 or greater than 1.4.

This may indicate the need for additional cross sections.

River: Schuylkill River Reach: Reach 1 RS: 46 Profile: 50-Year

Warning:The velocity head has changed by more than 0.5 ft (0.15 m). This may indicate the need for additional cross sections.

Warning:The conveyance ratio (upstream conveyance divided by downstream conveyance) is less than 0.7 or greater than 1.4.

This may indicate the need for additional cross sections.

River: Schuylkill River Reach: Reach 1 RS: 46 Profile: 100-Year

Warning:The velocity head has changed by more than 0.5 ft (0.15 m). This may indicate the need for additional cross sections.

Warning:The conveyance ratio (upstream conveyance divided by downstream conveyance) is less than 0.7 or greater than 1.4.

This may indicate the need for additional cross sections.

River: Schuylkill River Reach: Reach 1 RS: 46 Profile: 500-Year

Warning:The velocity head has changed by more than 0.5 ft (0.15 m). This may indicate the need for additional cross sections.

Warning:The conveyance ratio (upstream conveyance divided by downstream conveyance) is less than 0.7 or greater than 1.4.

This may indicate the need for additional cross sections.

Warning:The energy loss was greater than 1.0 ft (0.3 m). between the current and previous cross section. This may indicate

the need for additional cross sections.

River: Schuylkill River Reach: Reach 1 RS: 45 Profile: 10-Year

Warning:The conveyance ratio (upstream conveyance divided by downstream conveyance) is less than 0.7 or greater than 1.4.

This may indicate the need for additional cross sections.

River: Schuylkill River Reach: Reach 1 RS: 45 Profile: 50-Year

Warning:The conveyance ratio (upstream conveyance divided by downstream conveyance) is less than 0.7 or greater than 1.4.

This may indicate the need for additional cross sections.

River: Schuylkill River Reach: Reach 1 RS: 45 Profile: 100-Year

Warning:The conveyance ratio (upstream conveyance divided by downstream conveyance) is less than 0.7 or greater than 1.4.

This may indicate the need for additional cross sections.

River: Schuylkill River Reach: Reach 1 RS: 45 Profile: 500-Year

Warning:The conveyance ratio (upstream conveyance divided by downstream conveyance) is less than 0.7 or greater than 1.4.

This may indicate the need for additional cross sections.

River: Schuylkill River Reach: Reach 1 RS: 44 Profile: 10-Year

Warning:The conveyance ratio (upstream conveyance divided by downstream conveyance) is less than 0.7 or greater than 1.4.

This may indicate the need for additional cross sections.

River: Schuylkill River Reach: Reach 1 RS: 44 Profile: 50-Year

Warning: The conveyance ratio (upstream conveyance divided by downstream conveyance) is less than 0.7 or greater than 1.4.

This may indicate the need for additional cross sections.

River: Schuylkill River Reach: Reach 1 RS: 44 Profile: 100-Year

Warning: The conveyance ratio (upstream conveyance divided by downstream conveyance) is less than 0.7 or greater than 1.4.

This may indicate the need for additional cross sections.

River: Schuylkill River Reach: Reach 1 RS: 44 Profile: 500-Year

Warning: The velocity head has changed by more than 0.5 ft (0.15 m). This may indicate the need for additional cross sections.

Warning: The conveyance ratio (upstream conveyance divided by downstream conveyance) is less than 0.7 or greater than 1.4.

This may indicate the need for additional cross sections.

River: Schuylkill River Reach: Reach 1 RS: 41.5 Profile: 10-Year

Warning: The pressure flow/weir flow answer did not converge within the given number of iterations. However, the error was

small enough that the solution was treated as valid.

Note: The downstream water surface is above the minimum elevation required for orifice flow. The orifice flow equation was
used for pressure flow.

River: Schuylkill River Reach: Reach 1 RS: 41.5 Profile: 10-Year Upstream

Note: Multiple critical depths were found at this location. The critical depth with the lowest, valid, water surface was
used.

Note: For the cross section inside the bridge at the upstream end, the water surface and energy have been projected from
the upstream cross section. The selected bridge modeling method does not compute answers inside the bridge.

River: Schuylkill River Reach: Reach 1 RS: 41.5 Profile: 10-Year Downstream

Note: Multiple critical depths were found at this location. The critical depth with the lowest, valid, water surface was
used.

Note: For the cross section inside the bridge at the downstream end, the water surface is based on critical depth over the
weir. The energy has been projected.

River: Schuylkill River Reach: Reach 1 RS: 41.5 Profile: 50-Year

Warning: The pressure flow/weir flow answer did not converge within the given number of iterations. However, the error was
small enough that the solution was treated as valid.

Note: The downstream water surface is above the minimum elevation required for orifice flow. The orifice flow equation was
used for pressure flow.

River: Schuylkill River Reach: Reach 1 RS: 41.5 Profile: 50-Year Upstream

Note: Multiple critical depths were found at this location. The critical depth with the lowest, valid, water surface was
used.

Note: For the cross section inside the bridge at the upstream end, the water surface and energy have been projected from
the upstream cross section. The selected bridge modeling method does not compute answers inside the bridge.

River: Schuylkill River Reach: Reach 1 RS: 41.5 Profile: 50-Year Downstream

Note: Multiple critical depths were found at this location. The critical depth with the lowest, valid, water surface was
used.

Note: For the cross section inside the bridge at the downstream end, the water surface is based on critical depth over the
weir. The energy has been projected.

River: Schuylkill River Reach: Reach 1 RS: 41.5 Profile: 100-Year

Warning: The pressure flow/weir flow answer did not converge within the given number of iterations. However, the error was small enough that the solution was treated as valid.

Note: The downstream water surface is above the minimum elevation required for orifice flow. The orifice flow equation was used for pressure flow.

River: Schuylkill River Reach: Reach 1 RS: 41.5 Profile: 100-Year Upstream

Note: Multiple critical depths were found at this location. The critical depth with the lowest, valid, water surface was used.

Note: For the cross section inside the bridge at the upstream end, the water surface and energy have been projected from the upstream cross section. The selected bridge modeling method does not compute answers inside the bridge.

River: Schuylkill River Reach: Reach 1 RS: 41.5 Profile: 100-Year Downstream

Note: Multiple critical depths were found at this location. The critical depth with the lowest, valid, water surface was used.

Note: For the cross section inside the bridge at the downstream end, the water surface is based on critical depth over the weir. The energy has been projected.

River: Schuylkill River Reach: Reach 1 RS: 41.5 Profile: 500-Year

Warning: The pressure flow/weir flow answer did not converge within the given number of iterations. However, the error was small enough that the solution was treated as valid.

Note: The downstream water surface is above the minimum elevation required for orifice flow. The orifice flow equation was used for pressure flow.

River: Schuylkill River Reach: Reach 1 RS: 41.5 Profile: 500-Year Upstream

Note: Multiple critical depths were found at this location. The critical depth with the lowest, valid, water surface was used.

Note: For the cross section inside the bridge at the upstream end, the water surface and energy have been projected from the upstream cross section. The selected bridge modeling method does not compute answers inside the bridge.

River: Schuylkill River Reach: Reach 1 RS: 41.5 Profile: 500-Year Downstream

Note: Multiple critical depths were found at this location. The critical depth with the lowest, valid, water surface was used.

Note: For the cross section inside the bridge at the downstream end, the water surface is based on critical depth over the weir. The energy has been projected.

River: Schuylkill River Reach: Reach 1 RS: 41 Profile: 10-Year

Warning: Divided flow computed for this cross-section.

Warning: The conveyance ratio (upstream conveyance divided by downstream conveyance) is less than 0.7 or greater than 1.4.

This may indicate the need for additional cross sections.

River: Schuylkill River Reach: Reach 1 RS: 41 Profile: 50-Year

Warning: The conveyance ratio (upstream conveyance divided by downstream conveyance) is less than 0.7 or greater than 1.4.

This may indicate the need for additional cross sections.

River: Schuylkill River Reach: Reach 1 RS: 40 Profile: 50-Year

Warning: Divided flow computed for this cross-section.

River: Schuylkill River Reach: Reach 1 RS: 39 Profile: 10-Year

Warning: The velocity head has changed by more than 0.5 ft (0.15 m). This may indicate the

need for additional cross sections.

Warning:The conveyance ratio (upstream conveyance divided by downstream conveyance) is less than 0.7 or greater than 1.4.

This may indicate the need for additional cross sections.

Warning:The energy loss was greater than 1.0 ft (0.3 m). between the current and previous cross section. This may indicate

the need for additional cross sections.

River: Schuylkill River Reach: Reach 1 RS: 39 Profile: 50-Year

Warning:The velocity head has changed by more than 0.5 ft (0.15 m). This may indicate the need for additional cross sections.

Warning:The conveyance ratio (upstream conveyance divided by downstream conveyance) is less than 0.7 or greater than 1.4.

This may indicate the need for additional cross sections.

Warning:The energy loss was greater than 1.0 ft (0.3 m). between the current and previous cross section. This may indicate

the need for additional cross sections.

River: Schuylkill River Reach: Reach 1 RS: 39 Profile: 100-Year

Warning:Divided flow computed for this cross-section.

Warning:The velocity head has changed by more than 0.5 ft (0.15 m). This may indicate the need for additional cross sections.

Warning:The conveyance ratio (upstream conveyance divided by downstream conveyance) is less than 0.7 or greater than 1.4.

This may indicate the need for additional cross sections.

Warning:The energy loss was greater than 1.0 ft (0.3 m). between the current and previous cross section. This may indicate

the need for additional cross sections.

River: Schuylkill River Reach: Reach 1 RS: 39 Profile: 500-Year

Warning:The velocity head has changed by more than 0.5 ft (0.15 m). This may indicate the need for additional cross sections.

Warning:The conveyance ratio (upstream conveyance divided by downstream conveyance) is less than 0.7 or greater than 1.4.

This may indicate the need for additional cross sections.

Warning:The energy loss was greater than 1.0 ft (0.3 m). between the current and previous cross section. This may indicate

the need for additional cross sections.

River: Schuylkill River Reach: Reach 1 RS: 38 Profile: 10-Year

Warning:Divided flow computed for this cross-section.

Warning:The velocity head has changed by more than 0.5 ft (0.15 m). This may indicate the need for additional cross sections.

Warning:The energy loss was greater than 1.0 ft (0.3 m). between the current and previous cross section. This may indicate

the need for additional cross sections.

River: Schuylkill River Reach: Reach 1 RS: 38 Profile: 50-Year

Warning:Divided flow computed for this cross-section.

Warning:The energy loss was greater than 1.0 ft (0.3 m). between the current and previous cross section. This may indicate

the need for additional cross sections.

River: Schuylkill River Reach: Reach 1 RS: 38 Profile: 100-Year

Warning:Divided flow computed for this cross-section.

Warning:The velocity head has changed by more than 0.5 ft (0.15 m). This may indicate the need for additional cross sections.

Warning:The energy loss was greater than 1.0 ft (0.3 m). between the current and previous cross section. This may indicate

the need for additional cross sections.

River: Schuylkill River Reach: Reach 1 RS: 38 Profile: 500-Year

Warning:Divided flow computed for this cross-section.

Warning:The velocity head has changed by more than 0.5 ft (0.15 m). This may indicate the

need for additional cross sections.

Warning:The energy loss was greater than 1.0 ft (0.3 m). between the current and previous cross section. This may indicate

the need for additional cross sections.

River: Schuylkill River Reach: Reach 1 RS: 37 Profile: 10-Year

Warning:Divided flow computed for this cross-section.

Warning:The energy loss was greater than 1.0 ft (0.3 m). between the current and previous cross section. This may indicate

the need for additional cross sections.

River: Schuylkill River Reach: Reach 1 RS: 37 Profile: 50-Year

Warning:The energy loss was greater than 1.0 ft (0.3 m). between the current and previous cross section. This may indicate

the need for additional cross sections.

River: Schuylkill River Reach: Reach 1 RS: 37 Profile: 100-Year

Warning:The energy loss was greater than 1.0 ft (0.3 m). between the current and previous cross section. This may indicate

the need for additional cross sections.

River: Schuylkill River Reach: Reach 1 RS: 37 Profile: 500-Year

Warning:The energy loss was greater than 1.0 ft (0.3 m). between the current and previous cross section. This may indicate

the need for additional cross sections.

Project in English units

Project Description:
New Kernsville Dam Removal
D06-434
Tilden and Windsor Townships
Berks
County, PA

Schuylkill River FEMA FIS Flows from Downstream of Little
Schuylkill River to Upstream of Maiden Creek

10-Year = 23,200 CFS
50-Year
=36,300 CFS
100-Year = 42,800 CFS
500-Year = 60,200 CFS

PLAN DATA

Plan Title: Proposed Run
Plan File : P:\Devel\PROJECT FILES\+MISCELLANEOUS ITEMS\06-434 New Kernsville Dam\Hydrology & Hydraulics\CLOMR Review\HEC-RAS\NewKernsvilleDam.p02

Geometry Title: Proposed Model

Geometry File : P:\Devel\PROJECT FILES\+MISCELLANEOUS ITEMS\06-434 New Kernsville Dam\Hydrology & Hydraulics\CLOMR Review\HEC-RAS\NewKernsvilleDam.g02

Flow Title : FEMA Flow

NewKernsvilleDam.rep

Flow File : P:\Devel\PROJECT FILES\+MISCELLANEOUS ITEMS\D06-434 New Kernsville Dam\Hydrology & Hydraulics\CLOMR Review\HEC-RAS\NewKernsvilleDam.f01

Plan Summary Information:

Number of: Cross Sections = 16 Multiple Openings = 0
Culverts = 0 Inline Structures = 0
Bridges = 0 Lateral Structures = 0

Computational Information

Water surface calculation tolerance = 0.01
Critical depth calculation tolerance = 0.01
Maximum number of iterations = 20
Maximum difference tolerance = 0.3
Flow tolerance factor = 0.001

Computation Options

Critical depth computed only where necessary
Conveyance Calculation Method: Between every coordinate point (HEC2 Style)
Friction Slope Method: Average Conveyance
Computational Flow Regime: Subcritical Flow

FLOW DATA

Flow Title: FEMA Flow

ERRORS WARNINGS AND NOTES

Errors Warnings and Notes for Plan : Proposed Run

River: Schuylkill River Reach: Reach 1 RS: 53 Profile: 500-Year

Warning:Divided flow computed for this cross-section.

River: Schuylkill River Reach: Reach 1 RS: 51 Profile: 100-Year

Warning:The velocity head has changed by more than 0.5 ft (0.15 m). This may indicate the need for additional cross sections.

River: Schuylkill River Reach: Reach 1 RS: 51 Profile: 500-Year

Warning:The velocity head has changed by more than 0.5 ft (0.15 m). This may indicate the need for additional cross sections.

River: Schuylkill River Reach: Reach 1 RS: 50 Profile: 10-Year

Warning:The velocity head has changed by more than 0.5 ft (0.15 m). This may indicate the need for additional cross sections.

Warning:The energy loss was greater than 1.0 ft (0.3 m). between the current and previous cross section. This may indicate

the need for additional cross sections.

River: Schuylkill River Reach: Reach 1 RS: 50 Profile: 50-Year

Warning:The velocity head has changed by more than 0.5 ft (0.15 m). This may indicate the need for additional cross sections.

Warning:The energy loss was greater than 1.0 ft (0.3 m). between the current and previous cross section. This may indicate

the need for additional cross sections.

River: Schuylkill River Reach: Reach 1 RS: 50 Profile: 100-Year

Warning:The velocity head has changed by more than 0.5 ft (0.15 m). This may indicate the need for additional cross sections.

Warning:The energy loss was greater than 1.0 ft (0.3 m). between the current and previous cross section. This may indicate

the need for additional cross sections.

River: Schuylkill River Reach: Reach 1 RS: 50 Profile: 500-Year

Warning:The velocity head has changed by more than 0.5 ft (0.15 m). This may indicate the need for additional cross sections.

Warning:The energy loss was greater than 1.0 ft (0.3 m). between the current and previous cross section. This may indicate

the need for additional cross sections.

River: Schuylkill River Reach: Reach 1 RS: 49 Profile: 10-Year

Warning:The velocity head has changed by more than 0.5 ft (0.15 m). This may indicate the need for additional cross sections.

Warning:The energy loss was greater than 1.0 ft (0.3 m). between the current and previous cross section. This may indicate

the need for additional cross sections.

River: Schuylkill River Reach: Reach 1 RS: 49 Profile: 50-Year

Warning:The velocity head has changed by more than 0.5 ft (0.15 m). This may indicate the need for additional cross sections.

Warning:The energy loss was greater than 1.0 ft (0.3 m). between the current and previous

cross section. This may indicate

the need for additional cross sections.

River: Schuylkill River Reach: Reach 1 RS: 49 Profile: 100-Year

Warning: The velocity head has changed by more than 0.5 ft (0.15 m). This may indicate the need for additional cross sections.

Warning: The energy loss was greater than 1.0 ft (0.3 m). between the current and previous cross section. This may indicate

the need for additional cross sections.

River: Schuylkill River Reach: Reach 1 RS: 49 Profile: 500-Year

Warning: The velocity head has changed by more than 0.5 ft (0.15 m). This may indicate the need for additional cross sections.

Warning: The energy loss was greater than 1.0 ft (0.3 m). between the current and previous cross section. This may indicate

the need for additional cross sections.

River: Schuylkill River Reach: Reach 1 RS: 48 Profile: 10-Year

Warning: The velocity head has changed by more than 0.5 ft (0.15 m). This may indicate the need for additional cross sections.

Warning: The conveyance ratio (upstream conveyance divided by downstream conveyance) is less than 0.7 or greater than 1.4.

This may indicate the need for additional cross sections.

Warning: The energy loss was greater than 1.0 ft (0.3 m). between the current and previous cross section. This may indicate

the need for additional cross sections.

River: Schuylkill River Reach: Reach 1 RS: 48 Profile: 50-Year

Warning: The velocity head has changed by more than 0.5 ft (0.15 m). This may indicate the need for additional cross sections.

Warning: The energy loss was greater than 1.0 ft (0.3 m). between the current and previous cross section. This may indicate

the need for additional cross sections.

River: Schuylkill River Reach: Reach 1 RS: 48 Profile: 100-Year

Warning: The velocity head has changed by more than 0.5 ft (0.15 m). This may indicate the need for additional cross sections.

Warning: The energy loss was greater than 1.0 ft (0.3 m). between the current and previous cross section. This may indicate

the need for additional cross sections.

River: Schuylkill River Reach: Reach 1 RS: 48 Profile: 500-Year

Warning: The velocity head has changed by more than 0.5 ft (0.15 m). This may indicate the need for additional cross sections.

Warning: The energy loss was greater than 1.0 ft (0.3 m). between the current and previous cross section. This may indicate

the need for additional cross sections.

River: Schuylkill River Reach: Reach 1 RS: 47 Profile: 10-Year

Warning: The energy loss was greater than 1.0 ft (0.3 m). between the current and previous cross section. This may indicate

the need for additional cross sections.

River: Schuylkill River Reach: Reach 1 RS: 47 Profile: 50-Year

Warning: The energy loss was greater than 1.0 ft (0.3 m). between the current and previous cross section. This may indicate

the need for additional cross sections.

River: Schuylkill River Reach: Reach 1 RS: 47 Profile: 100-Year

Flow Title : FEMA Flow

NewKernsvilleDam.rep

Flow File : P:\Devel\PROJECT FILES\+MISCELLANEOUS ITEMS\D06-434 New Kernsville Dam\Hydrology & Hydraulics\CLOMR Review\HEC-RAS\NewKernsvilleDam.f01

Plan Summary Information:

Number of: Cross Sections = 30 Multiple Openings = 0
 Culverts = 0 Inline Structures = 0
 Bridges = 1 Lateral Structures = 0

Computational Information

Water surface calculation tolerance = 0.01
Critical depth calculation tolerance = 0.01
Maximum number of iterations = 20
Maximum difference tolerance = 0.3
Flow tolerance factor = 0.001

Computation Options

Critical depth computed only where necessary
Conveyance Calculation Method: Between every coordinate point (HEC2 Style)
Friction Slope Method: Average Conveyance
Computational Flow Regime: Subcritical Flow

ERRORS WARNINGS AND NOTES

Errors Warnings and Notes for Plan : Corr. Effect. Run

River: Schuylkill River Reach: Reach 1 RS: 53 Profile: 500-Year

Warning:Divided flow computed for this cross-section.

River: Schuylkill River Reach: Reach 1 RS: 51 Profile: 100-Year

Warning:The velocity head has changed by more than 0.5 ft (0.15 m). This may indicate the need for additional cross sections.

River: Schuylkill River Reach: Reach 1 RS: 51 Profile: 500-Year

Warning:The velocity head has changed by more than 0.5 ft (0.15 m). This may indicate the need for additional cross sections.

River: Schuylkill River Reach: Reach 1 RS: 48 Profile: 10-Year

Warning:The velocity head has changed by more than 0.5 ft (0.15 m). This may indicate the need for additional cross sections.

Warning:The conveyance ratio (upstream conveyance divided by downstream conveyance) is less than 0.7 or greater than 1.4.

This may indicate the need for additional cross sections.

Warning:The energy loss was greater than 1.0 ft (0.3 m). between the current and previous cross section. This may indicate

the need for additional cross sections.

River: Schuylkill River Reach: Reach 1 RS: 48 Profile: 50-Year

Warning:The velocity head has changed by more than 0.5 ft (0.15 m). This may indicate the need for additional cross sections.

Warning:The conveyance ratio (upstream conveyance divided by downstream conveyance) is less than 0.7 or greater than 1.4.

This may indicate the need for additional cross sections.

Warning:The energy loss was greater than 1.0 ft (0.3 m). between the current and previous cross section. This may indicate

the need for additional cross sections.

River: Schuylkill River Reach: Reach 1 RS: 48 Profile: 100-Year

Warning:The velocity head has changed by more than 0.5 ft (0.15 m). This may indicate the need for additional cross sections.

Warning:The conveyance ratio (upstream conveyance divided by downstream conveyance) is less than 0.7 or greater than 1.4.

This may indicate the need for additional cross sections.

Warning:The energy loss was greater than 1.0 ft (0.3 m). between the current and previous cross section. This may indicate

the need for additional cross sections.

River: Schuylkill River Reach: Reach 1 RS: 48 Profile: 500-Year

Warning:The velocity head has changed by more than 0.5 ft (0.15 m). This may indicate the need for additional cross sections.

Warning:The energy loss was greater than 1.0 ft (0.3 m). between the current and previous cross section. This may indicate

the need for additional cross sections.

River: Schuylkill River Reach: Reach 1 RS: 47 Profile: 50-Year

Warning:The velocity head has changed by more than 0.5 ft (0.15 m). This may indicate the need for additional cross sections.

Warning:The energy loss was greater than 1.0 ft (0.3 m). between the current and previous cross section. This may indicate

the need for additional cross sections.

River: Schuylkill River Reach: Reach 1 RS: 47 Profile: 100-Year

Warning:The velocity head has changed by more than 0.5 ft (0.15 m). This may indicate the need for additional cross sections.

Warning:The energy loss was greater than 1.0 ft (0.3 m). between the current and previous cross section. This may indicate

the need for additional cross sections.

River: Schuylkill River Reach: Reach 1 RS: 47 Profile: 500-Year

Warning:The velocity head has changed by more than 0.5 ft (0.15 m). This may indicate the need for additional cross sections.

Warning:The energy loss was greater than 1.0 ft (0.3 m). between the current and previous cross section. This may indicate

the need for additional cross sections.

River: Schuylkill River Reach: Reach 1 RS: 46 Profile: 10-Year

Warning:The conveyance ratio (upstream conveyance divided by downstream conveyance) is less than 0.7 or greater than 1.4.

This may indicate the need for additional cross sections.

River: Schuylkill River Reach: Reach 1 RS: 46 Profile: 50-Year

Warning:The velocity head has changed by more than 0.5 ft (0.15 m). This may indicate the need for additional cross sections.

Warning:The conveyance ratio (upstream conveyance divided by downstream conveyance) is less than 0.7 or greater than 1.4.

This may indicate the need for additional cross sections.

River: Schuylkill River Reach: Reach 1 RS: 46 Profile: 100-Year

Warning:The velocity head has changed by more than 0.5 ft (0.15 m). This may indicate the need for additional cross sections.

Warning:The conveyance ratio (upstream conveyance divided by downstream conveyance) is less than 0.7 or greater than 1.4.

This may indicate the need for additional cross sections.

River: Schuylkill River Reach: Reach 1 RS: 46 Profile: 500-Year

Warning:The velocity head has changed by more than 0.5 ft (0.15 m). This may indicate the need for additional cross sections.

Warning:The conveyance ratio (upstream conveyance divided by downstream conveyance) is less than 0.7 or greater than 1.4.

This may indicate the need for additional cross sections.

Warning:The energy loss was greater than 1.0 ft (0.3 m). between the current and previous cross section. This may indicate

the need for additional cross sections.

River: Schuylkill River Reach: Reach 1 RS: 45 Profile: 10-Year

Warning:The conveyance ratio (upstream conveyance divided by downstream conveyance) is less than 0.7 or greater than 1.4.

This may indicate the need for additional cross sections.

River: Schuylkill River Reach: Reach 1 RS: 45 Profile: 50-Year

Warning:The conveyance ratio (upstream conveyance divided by downstream conveyance) is less than 0.7 or greater than 1.4.

This may indicate the need for additional cross sections.

River: Schuylkill River Reach: Reach 1 RS: 45 Profile: 100-Year

Warning: The conveyance ratio (upstream conveyance divided by downstream conveyance) is less than 0.7 or greater than 1.4.

This may indicate the need for additional cross sections.

River: Schuylkill River Reach: Reach 1 RS: 45 Profile: 500-Year

Warning: The conveyance ratio (upstream conveyance divided by downstream conveyance) is less than 0.7 or greater than 1.4.

This may indicate the need for additional cross sections.

River: Schuylkill River Reach: Reach 1 RS: 44 Profile: 10-Year

Warning: The conveyance ratio (upstream conveyance divided by downstream conveyance) is less than 0.7 or greater than 1.4.

This may indicate the need for additional cross sections.

River: Schuylkill River Reach: Reach 1 RS: 44 Profile: 50-Year

Warning: The conveyance ratio (upstream conveyance divided by downstream conveyance) is less than 0.7 or greater than 1.4.

This may indicate the need for additional cross sections.

River: Schuylkill River Reach: Reach 1 RS: 44 Profile: 100-Year

Warning: The conveyance ratio (upstream conveyance divided by downstream conveyance) is less than 0.7 or greater than 1.4.

This may indicate the need for additional cross sections.

River: Schuylkill River Reach: Reach 1 RS: 44 Profile: 500-Year

Warning: The velocity head has changed by more than 0.5 ft (0.15 m). This may indicate the need for additional cross sections.

Warning: The conveyance ratio (upstream conveyance divided by downstream conveyance) is less than 0.7 or greater than 1.4.

This may indicate the need for additional cross sections.

River: Schuylkill River Reach: Reach 1 RS: 41.5 Profile: 10-Year

Warning: The pressure flow/weir flow answer did not converge within the given number of iterations. However, the error was

small enough that the solution was treated as valid.

Note: The downstream water surface is above the minimum elevation required for orifice flow. The orifice flow equation was used for pressure flow.

River: Schuylkill River Reach: Reach 1 RS: 41.5 Profile: 10-Year Upstream

Note: Multiple critical depths were found at this location. The critical depth with the lowest, valid, water surface was used.

Note: For the cross section inside the bridge at the upstream end, the water surface and energy have been projected from

the upstream cross section. The selected bridge modeling method does not compute answers inside the bridge.

River: Schuylkill River Reach: Reach 1 RS: 41.5 Profile: 10-Year Downstream

Note: Multiple critical depths were found at this location. The critical depth with the lowest, valid, water surface was used.

Note: For the cross section inside the bridge at the downstream end, the water surface is based on critical depth over the

weir. The energy has been projected.

River: Schuylkill River Reach: Reach 1 RS: 41.5 Profile: 50-Year

Warning: The pressure flow/weir flow answer did not converge within the given number of iterations. However, the error was

small enough that the solution was treated as valid.

Note: The downstream water surface is above the minimum elevation required for orifice flow. The orifice flow equation was used for pressure flow.

River: Schuylkill River Reach: Reach 1 RS: 41.5 Profile: 50-Year Upstream

Note: Multiple critical depths were found at this location. The critical depth with the lowest, valid, water surface was

used.

Note: For the cross section inside the bridge at the upstream end, the water surface and energy have been projected from the upstream cross section. The selected bridge modeling method does not compute answers inside the bridge.

River: Schuylkill River Reach: Reach 1 RS: 41.5 Profile: 50-Year Downstream

Note: Multiple critical depths were found at this location. The critical depth with the lowest, valid, water surface was used.

Note: For the cross section inside the bridge at the downstream end, the water surface is based on critical depth over the weir. The energy has been projected.

River: Schuylkill River Reach: Reach 1 RS: 41.5 Profile: 100-Year

Warning: The pressure flow/weir flow answer did not converge within the given number of iterations. However, the error was small enough that the solution was treated as valid.

Note: The downstream water surface is above the minimum elevation required for orifice flow. The orifice flow equation was used for pressure flow.

River: Schuylkill River Reach: Reach 1 RS: 41.5 Profile: 100-Year Upstream

Note: Multiple critical depths were found at this location. The critical depth with the lowest, valid, water surface was used.

Note: For the cross section inside the bridge at the upstream end, the water surface and energy have been projected from the upstream cross section. The selected bridge modeling method does not compute answers inside the bridge.

River: Schuylkill River Reach: Reach 1 RS: 41.5 Profile: 100-Year Downstream

Note: Multiple critical depths were found at this location. The critical depth with the lowest, valid, water surface was used.

Note: For the cross section inside the bridge at the downstream end, the water surface is based on critical depth over the weir. The energy has been projected.

River: Schuylkill River Reach: Reach 1 RS: 41.5 Profile: 500-Year

Warning: The pressure flow/weir flow answer did not converge within the given number of iterations. However, the error was small enough that the solution was treated as valid.

Note: The downstream water surface is above the minimum elevation required for orifice flow. The orifice flow equation was used for pressure flow.

River: Schuylkill River Reach: Reach 1 RS: 41.5 Profile: 500-Year Upstream

Note: Multiple critical depths were found at this location. The critical depth with the lowest, valid, water surface was used.

Note: For the cross section inside the bridge at the upstream end, the water surface and energy have been projected from the upstream cross section. The selected bridge modeling method does not compute answers inside the bridge.

River: Schuylkill River Reach: Reach 1 RS: 41.5 Profile: 500-Year Downstream

Note: Multiple critical depths were found at this location. The critical depth with the lowest, valid, water surface was used.

Note: For the cross section inside the bridge at the downstream end, the water surface is based on critical depth over the weir. The energy has been projected.

River: Schuylkill River Reach: Reach 1 RS: 41 Profile: 10-Year

Warning:Divided flow computed for this cross-section.

Warning:The conveyance ratio (upstream conveyance divided by downstream conveyance) is less than 0.7 or greater than 1.4.

This may indicate the need for additional cross sections.

River: Schuylkill River Reach: Reach 1 RS: 41 Profile: 50-Year

Warning:The conveyance ratio (upstream conveyance divided by downstream conveyance) is less than 0.7 or greater than 1.4.

This may indicate the need for additional cross sections.

River: Schuylkill River Reach: Reach 1 RS: 40 Profile: 50-Year

Warning:Divided flow computed for this cross-section.

River: Schuylkill River Reach: Reach 1 RS: 39 Profile: 10-Year

Warning:The velocity head has changed by more than 0.5 ft (0.15 m). This may indicate the need for additional cross sections.

Warning:The conveyance ratio (upstream conveyance divided by downstream conveyance) is less than 0.7 or greater than 1.4.

This may indicate the need for additional cross sections.

Warning:The energy loss was greater than 1.0 ft (0.3 m). between the current and previous cross section. This may indicate

the need for additional cross sections.

River: Schuylkill River Reach: Reach 1 RS: 39 Profile: 50-Year

Warning:The velocity head has changed by more than 0.5 ft (0.15 m). This may indicate the need for additional cross sections.

Warning:The conveyance ratio (upstream conveyance divided by downstream conveyance) is less than 0.7 or greater than 1.4.

This may indicate the need for additional cross sections.

Warning:The energy loss was greater than 1.0 ft (0.3 m). between the current and previous cross section. This may indicate

the need for additional cross sections.

River: Schuylkill River Reach: Reach 1 RS: 39 Profile: 100-Year

Warning:Divided flow computed for this cross-section.

Warning:The velocity head has changed by more than 0.5 ft (0.15 m). This may indicate the need for additional cross sections.

Warning:The conveyance ratio (upstream conveyance divided by downstream conveyance) is less than 0.7 or greater than 1.4.

This may indicate the need for additional cross sections.

Warning:The energy loss was greater than 1.0 ft (0.3 m). between the current and previous cross section. This may indicate

the need for additional cross sections.

River: Schuylkill River Reach: Reach 1 RS: 39 Profile: 500-Year

Warning:The velocity head has changed by more than 0.5 ft (0.15 m). This may indicate the need for additional cross sections.

Warning:The conveyance ratio (upstream conveyance divided by downstream conveyance) is less than 0.7 or greater than 1.4.

This may indicate the need for additional cross sections.

Warning:The energy loss was greater than 1.0 ft (0.3 m). between the current and previous cross section. This may indicate

the need for additional cross sections.

River: Schuylkill River Reach: Reach 1 RS: 38 Profile: 10-Year

Warning:Divided flow computed for this cross-section.

Warning:The velocity head has changed by more than 0.5 ft (0.15 m). This may indicate the need for additional cross sections.

Warning:The energy loss was greater than 1.0 ft (0.3 m). between the current and previous cross section. This may indicate

the need for additional cross sections.

River: Schuylkill River Reach: Reach 1 RS: 38 Profile: 50-Year

Warning:Divided flow computed for this cross-section.

Warning:The energy loss was greater than 1.0 ft (0.3 m). between the current and previous

cross section. This may indicate

the need for additional cross sections.

River: Schuylkill River Reach: Reach 1 RS: 38 Profile: 100-Year

Warning:Divided flow computed for this cross-section.

Warning:The velocity head has changed by more than 0.5 ft (0.15 m). This may indicate the need for additional cross sections.

Warning:The energy loss was greater than 1.0 ft (0.3 m). between the current and previous cross section. This may indicate

the need for additional cross sections.

River: Schuylkill River Reach: Reach 1 RS: 38 Profile: 500-Year

Warning:Divided flow computed for this cross-section.

Warning:The velocity head has changed by more than 0.5 ft (0.15 m). This may indicate the need for additional cross sections.

Warning:The energy loss was greater than 1.0 ft (0.3 m). between the current and previous cross section. This may indicate

the need for additional cross sections.

River: Schuylkill River Reach: Reach 1 RS: 37 Profile: 10-Year

Warning:Divided flow computed for this cross-section.

Warning:The energy loss was greater than 1.0 ft (0.3 m). between the current and previous cross section. This may indicate

the need for additional cross sections.

River: Schuylkill River Reach: Reach 1 RS: 37 Profile: 50-Year

Warning:The energy loss was greater than 1.0 ft (0.3 m). between the current and previous cross section. This may indicate

the need for additional cross sections.

River: Schuylkill River Reach: Reach 1 RS: 37 Profile: 100-Year

Warning:The energy loss was greater than 1.0 ft (0.3 m). between the current and previous cross section. This may indicate

the need for additional cross sections.

River: Schuylkill River Reach: Reach 1 RS: 37 Profile: 500-Year

Warning:The energy loss was greater than 1.0 ft (0.3 m). between the current and previous cross section. This may indicate

the need for additional cross sections.

PROJECT DATA

Project Title: New Kernsville Dam
Project File : NewKernsvilleDam.prj
Run Date and Time: 5/8/2018 8:54:29 AM

Project in English units

Project Description:
New Kernsville Dam Removal
D06-434
Tilden and Windsor Townships
Berks
County, PA

Schuylkill River FEMA FIS Flows from Downstream of Little
Schuylkill River to Upstream of Maiden Creek

10-Year = 23,200 CFS
50-Year
=36,300 CFS
100-Year = 42,800 CFS
500-Year = 60,200 CFS

PLAN DATA

Plan Title: Corrected Proposed Run
Plan File : P:\Devel\PROJECT FILES\+MISCELLANEOUS ITEMS\06-434 New Kernsville Dam\Hydrology & Hydraulics\CLOMR Review\HEC-RAS\NewKernsvilleDam.p04

Geometry Title: Corrected Proposed Model
Geometry File : P:\Devel\PROJECT FILES\+MISCELLANEOUS ITEMS\06-434 New Kernsville Dam\Hydrology & Hydraulics\CLOMR Review\HEC-RAS\NewKernsvilleDam.g04

Flow Title : FEMA Flow

NewKernsvilleDam.rep

Flow File : P:\Devel\PROJECT FILES\+MISCELLANEOUS ITEMS\D06-434 New Kernsville Dam\Hydrology & Hydraulics\CLOMR Review\HEC-RAS\NewKernsvilleDam.f01

Plan Summary Information:

Number of: Cross Sections = 28 Multiple Openings = 0
 Culverts = 0 Inline Structures = 0
 Bridges = 0 Lateral Structures = 0

Computational Information

Water surface calculation tolerance = 0.01
Critical depth calculation tolerance = 0.01
Maximum number of iterations = 20
Maximum difference tolerance = 0.3
Flow tolerance factor = 0.001

Computation Options

Critical depth computed only where necessary
Conveyance Calculation Method: Between every coordinate point (HEC2 Style)
Friction Slope Method: Average Conveyance
Computational Flow Regime: Subcritical Flow

FLOW DATA

Flow Title: FEMA Flow

Flow File : P:\Devel\PROJECT FILES\+MISCELLANEOUS ITEMS\D06-434 New Kernsville Dam\Hydrology & Hydraulics\CLOMR Review\HEC-RAS\NewKernsvilleDam.f01

ERRORS WARNINGS AND NOTES

Errors Warnings and Notes for Plan : Corr. Proposed Run

River: Schuylkill River Reach: Reach 1 RS: 53 Profile: 500-Year

Warning:Divided flow computed for this cross-section.

River: Schuylkill River Reach: Reach 1 RS: 51 Profile: 100-Year

Warning:The velocity head has changed by more than 0.5 ft (0.15 m). This may indicate the need for additional cross sections.

River: Schuylkill River Reach: Reach 1 RS: 51 Profile: 500-Year

Warning:The velocity head has changed by more than 0.5 ft (0.15 m). This may indicate the need for additional cross sections.

River: Schuylkill River Reach: Reach 1 RS: 48 Profile: 10-Year

Warning:The velocity head has changed by more than 0.5 ft (0.15 m). This may indicate the need for additional cross sections.

Warning:The conveyance ratio (upstream conveyance divided by downstream conveyance) is less than 0.7 or greater than 1.4.

This may indicate the need for additional cross sections.

Warning:The energy loss was greater than 1.0 ft (0.3 m). between the current and previous cross section. This may indicate

the need for additional cross sections.

River: Schuylkill River Reach: Reach 1 RS: 48 Profile: 50-Year

Warning:The velocity head has changed by more than 0.5 ft (0.15 m). This may indicate the need for additional cross sections.

Warning:The energy loss was greater than 1.0 ft (0.3 m). between the current and previous cross section. This may indicate

the need for additional cross sections.

River: Schuylkill River Reach: Reach 1 RS: 48 Profile: 100-Year

Warning:The velocity head has changed by more than 0.5 ft (0.15 m). This may indicate the need for additional cross sections.

Warning:The energy loss was greater than 1.0 ft (0.3 m). between the current and previous cross section. This may indicate

the need for additional cross sections.

River: Schuylkill River Reach: Reach 1 RS: 48 Profile: 500-Year

Warning:The velocity head has changed by more than 0.5 ft (0.15 m). This may indicate the need for additional cross sections.

Warning:The energy loss was greater than 1.0 ft (0.3 m). between the current and previous cross section. This may indicate

the need for additional cross sections.

River: Schuylkill River Reach: Reach 1 RS: 47 Profile: 10-Year

Warning:The energy loss was greater than 1.0 ft (0.3 m). between the current and previous cross section. This may indicate

the need for additional cross sections.

River: Schuylkill River Reach: Reach 1 RS: 47 Profile: 50-Year

Warning:The energy loss was greater than 1.0 ft (0.3 m). between the current and previous cross section. This may indicate

the need for additional cross sections.

River: Schuylkill River Reach: Reach 1 RS: 47 Profile: 100-Year

Warning: The energy loss was greater than 1.0 ft (0.3 m). between the current and previous cross section. This may indicate

the need for additional cross sections.

River: Schuylkill River Reach: Reach 1 RS: 47 Profile: 500-Year

Warning: The energy loss was greater than 1.0 ft (0.3 m). between the current and previous cross section. This may indicate

the need for additional cross sections.

River: Schuylkill River Reach: Reach 1 RS: 46 Profile: 10-Year

Warning: The velocity head has changed by more than 0.5 ft (0.15 m). This may indicate the need for additional cross sections.

Warning: The energy loss was greater than 1.0 ft (0.3 m). between the current and previous cross section. This may indicate

the need for additional cross sections.

River: Schuylkill River Reach: Reach 1 RS: 46 Profile: 50-Year

Warning: The velocity head has changed by more than 0.5 ft (0.15 m). This may indicate the need for additional cross sections.

Warning: The energy loss was greater than 1.0 ft (0.3 m). between the current and previous cross section. This may indicate

the need for additional cross sections.

River: Schuylkill River Reach: Reach 1 RS: 46 Profile: 100-Year

Warning: The velocity head has changed by more than 0.5 ft (0.15 m). This may indicate the need for additional cross sections.

Warning: The energy loss was greater than 1.0 ft (0.3 m). between the current and previous cross section. This may indicate

the need for additional cross sections.

River: Schuylkill River Reach: Reach 1 RS: 46 Profile: 500-Year

Warning: The velocity head has changed by more than 0.5 ft (0.15 m). This may indicate the need for additional cross sections.

Warning: The energy loss was greater than 1.0 ft (0.3 m). between the current and previous cross section. This may indicate

the need for additional cross sections.

River: Schuylkill River Reach: Reach 1 RS: 45 Profile: 10-Year

Warning: The conveyance ratio (upstream conveyance divided by downstream conveyance) is less than 0.7 or greater than 1.4.

This may indicate the need for additional cross sections.

Warning: The energy loss was greater than 1.0 ft (0.3 m). between the current and previous cross section. This may indicate

the need for additional cross sections.

River: Schuylkill River Reach: Reach 1 RS: 45 Profile: 50-Year

Warning: The energy loss was greater than 1.0 ft (0.3 m). between the current and previous cross section. This may indicate

the need for additional cross sections.

River: Schuylkill River Reach: Reach 1 RS: 45 Profile: 100-Year

Warning: The energy loss was greater than 1.0 ft (0.3 m). between the current and previous cross section. This may indicate

the need for additional cross sections.

River: Schuylkill River Reach: Reach 1 RS: 45 Profile: 500-Year

Warning: The velocity head has changed by more than 0.5 ft (0.15 m). This may indicate the need for additional cross sections.

Warning: The energy loss was greater than 1.0 ft (0.3 m). between the current and previous cross section. This may indicate

the need for additional cross sections.

River: Schuylkill River Reach: Reach 1 RS: 44 Profile: 10-Year

Warning: The energy loss was greater than 1.0 ft (0.3 m). between the current and previous cross section. This may indicate

the need for additional cross sections.

River: Schuylkill River Reach: Reach 1 RS: 44 Profile: 50-Year

Warning:The energy loss was greater than 1.0 ft (0.3 m). between the current and previous cross section. This may indicate

the need for additional cross sections.

River: Schuylkill River Reach: Reach 1 RS: 44 Profile: 100-Year

Warning:The energy loss was greater than 1.0 ft (0.3 m). between the current and previous cross section. This may indicate

the need for additional cross sections.

River: Schuylkill River Reach: Reach 1 RS: 44 Profile: 500-Year

Warning:The energy loss was greater than 1.0 ft (0.3 m). between the current and previous cross section. This may indicate

the need for additional cross sections.

River: Schuylkill River Reach: Reach 1 RS: 41 Profile: 10-Year

Warning:Divided flow computed for this cross-section.

Warning:The conveyance ratio (upstream conveyance divided by downstream conveyance) is less than 0.7 or greater than 1.4.

This may indicate the need for additional cross sections.

River: Schuylkill River Reach: Reach 1 RS: 41 Profile: 50-Year

Warning:The conveyance ratio (upstream conveyance divided by downstream conveyance) is less than 0.7 or greater than 1.4.

This may indicate the need for additional cross sections.

River: Schuylkill River Reach: Reach 1 RS: 40 Profile: 50-Year

Warning:Divided flow computed for this cross-section.

River: Schuylkill River Reach: Reach 1 RS: 39 Profile: 10-Year

Warning:The velocity head has changed by more than 0.5 ft (0.15 m). This may indicate the need for additional cross sections.

Warning:The conveyance ratio (upstream conveyance divided by downstream conveyance) is less than 0.7 or greater than 1.4.

This may indicate the need for additional cross sections.

Warning:The energy loss was greater than 1.0 ft (0.3 m). between the current and previous cross section. This may indicate

the need for additional cross sections.

River: Schuylkill River Reach: Reach 1 RS: 39 Profile: 50-Year

Warning:The velocity head has changed by more than 0.5 ft (0.15 m). This may indicate the need for additional cross sections.

Warning:The conveyance ratio (upstream conveyance divided by downstream conveyance) is less than 0.7 or greater than 1.4.

This may indicate the need for additional cross sections.

Warning:The energy loss was greater than 1.0 ft (0.3 m). between the current and previous cross section. This may indicate

the need for additional cross sections.

River: Schuylkill River Reach: Reach 1 RS: 39 Profile: 100-Year

Warning:Divided flow computed for this cross-section.

Warning:The velocity head has changed by more than 0.5 ft (0.15 m). This may indicate the need for additional cross sections.

Warning:The conveyance ratio (upstream conveyance divided by downstream conveyance) is less than 0.7 or greater than 1.4.

This may indicate the need for additional cross sections.

Warning:The energy loss was greater than 1.0 ft (0.3 m). between the current and previous cross section. This may indicate

the need for additional cross sections.

River: Schuylkill River Reach: Reach 1 RS: 39 Profile: 500-Year

Warning:The velocity head has changed by more than 0.5 ft (0.15 m). This may indicate the need for additional cross sections.

Warning:The conveyance ratio (upstream conveyance divided by downstream conveyance) is less than 0.7 or greater than 1.4.

This may indicate the need for additional cross sections.

Warning:The energy loss was greater than 1.0 ft (0.3 m). between the current and previous cross section. This may indicate

the need for additional cross sections.

River: Schuylkill River Reach: Reach 1 RS: 38 Profile: 10-Year

Warning:Divided flow computed for this cross-section.

Warning:The velocity head has changed by more than 0.5 ft (0.15 m). This may indicate the need for additional cross sections.

Warning:The energy loss was greater than 1.0 ft (0.3 m). between the current and previous cross section. This may indicate

the need for additional cross sections.

River: Schuylkill River Reach: Reach 1 RS: 38 Profile: 50-Year

Warning:Divided flow computed for this cross-section.

Warning:The energy loss was greater than 1.0 ft (0.3 m). between the current and previous cross section. This may indicate

the need for additional cross sections.

River: Schuylkill River Reach: Reach 1 RS: 38 Profile: 100-Year

Warning:Divided flow computed for this cross-section.

Warning:The velocity head has changed by more than 0.5 ft (0.15 m). This may indicate the need for additional cross sections.

Warning:The energy loss was greater than 1.0 ft (0.3 m). between the current and previous cross section. This may indicate

the need for additional cross sections.

River: Schuylkill River Reach: Reach 1 RS: 38 Profile: 500-Year

Warning:Divided flow computed for this cross-section.

Warning:The velocity head has changed by more than 0.5 ft (0.15 m). This may indicate the need for additional cross sections.

Warning:The energy loss was greater than 1.0 ft (0.3 m). between the current and previous cross section. This may indicate

the need for additional cross sections.

River: Schuylkill River Reach: Reach 1 RS: 37 Profile: 10-Year

Warning:Divided flow computed for this cross-section.

Warning:The energy loss was greater than 1.0 ft (0.3 m). between the current and previous cross section. This may indicate

the need for additional cross sections.

River: Schuylkill River Reach: Reach 1 RS: 37 Profile: 50-Year

Warning:The energy loss was greater than 1.0 ft (0.3 m). between the current and previous cross section. This may indicate

the need for additional cross sections.

River: Schuylkill River Reach: Reach 1 RS: 37 Profile: 100-Year

Warning:The energy loss was greater than 1.0 ft (0.3 m). between the current and previous cross section. This may indicate

the need for additional cross sections.

River: Schuylkill River Reach: Reach 1 RS: 37 Profile: 500-Year

Warning:The energy loss was greater than 1.0 ft (0.3 m). between the current and previous cross section. This may indicate

the need for additional cross sections.

**N – FEMA FIS Flood Profiles with Corrected Proposed
Water Surface Elevations**

O – FEMA Flood Insurance Rate Maps

NOTES TO USERS

This map is a Flood Insurance Rate Map (FIRMs) prepared by the Federal Emergency Management Agency (FEMA). It is used by insurance companies to determine flood insurance rates. The map shows the boundaries of flood hazard areas, including Special Flood Hazard Areas (SFHAs), and the elevation of buildings above the base flood elevation. The map also shows the location of roads, rivers, and other geographical features. The map is based on the best available information at the time it was prepared, but it may not reflect all changes in the area since the map was last revised. The map is not a substitute for a detailed survey or a professional engineering report. It is intended to provide general information about flood hazards and to help individuals make informed decisions about flood insurance.

For more information, contact your insurance agent or FEMA.

the same time, the number of people who have been able to leave the country has increased, and those who remain are more likely to be employed in the informal sector.

There are many reasons why people leave their home countries. Some leave for better opportunities elsewhere, while others leave due to political instability or conflict. In some cases, people leave to seek work, while in others, they leave to escape poverty or persecution. The reasons for migration are complex and varied, and there is no single answer to the question of why people leave their home countries.

Migration can have both positive and negative effects on the countries involved. On the one hand, it can help to relieve pressure on resources and infrastructure in the source country, and provide much-needed labor for the destination country. It can also lead to increased economic growth and development in the destination country. On the other hand, migration can lead to social and cultural conflicts between the native population and the immigrant population, and can contribute to the decline of traditional ways of life in the source country.

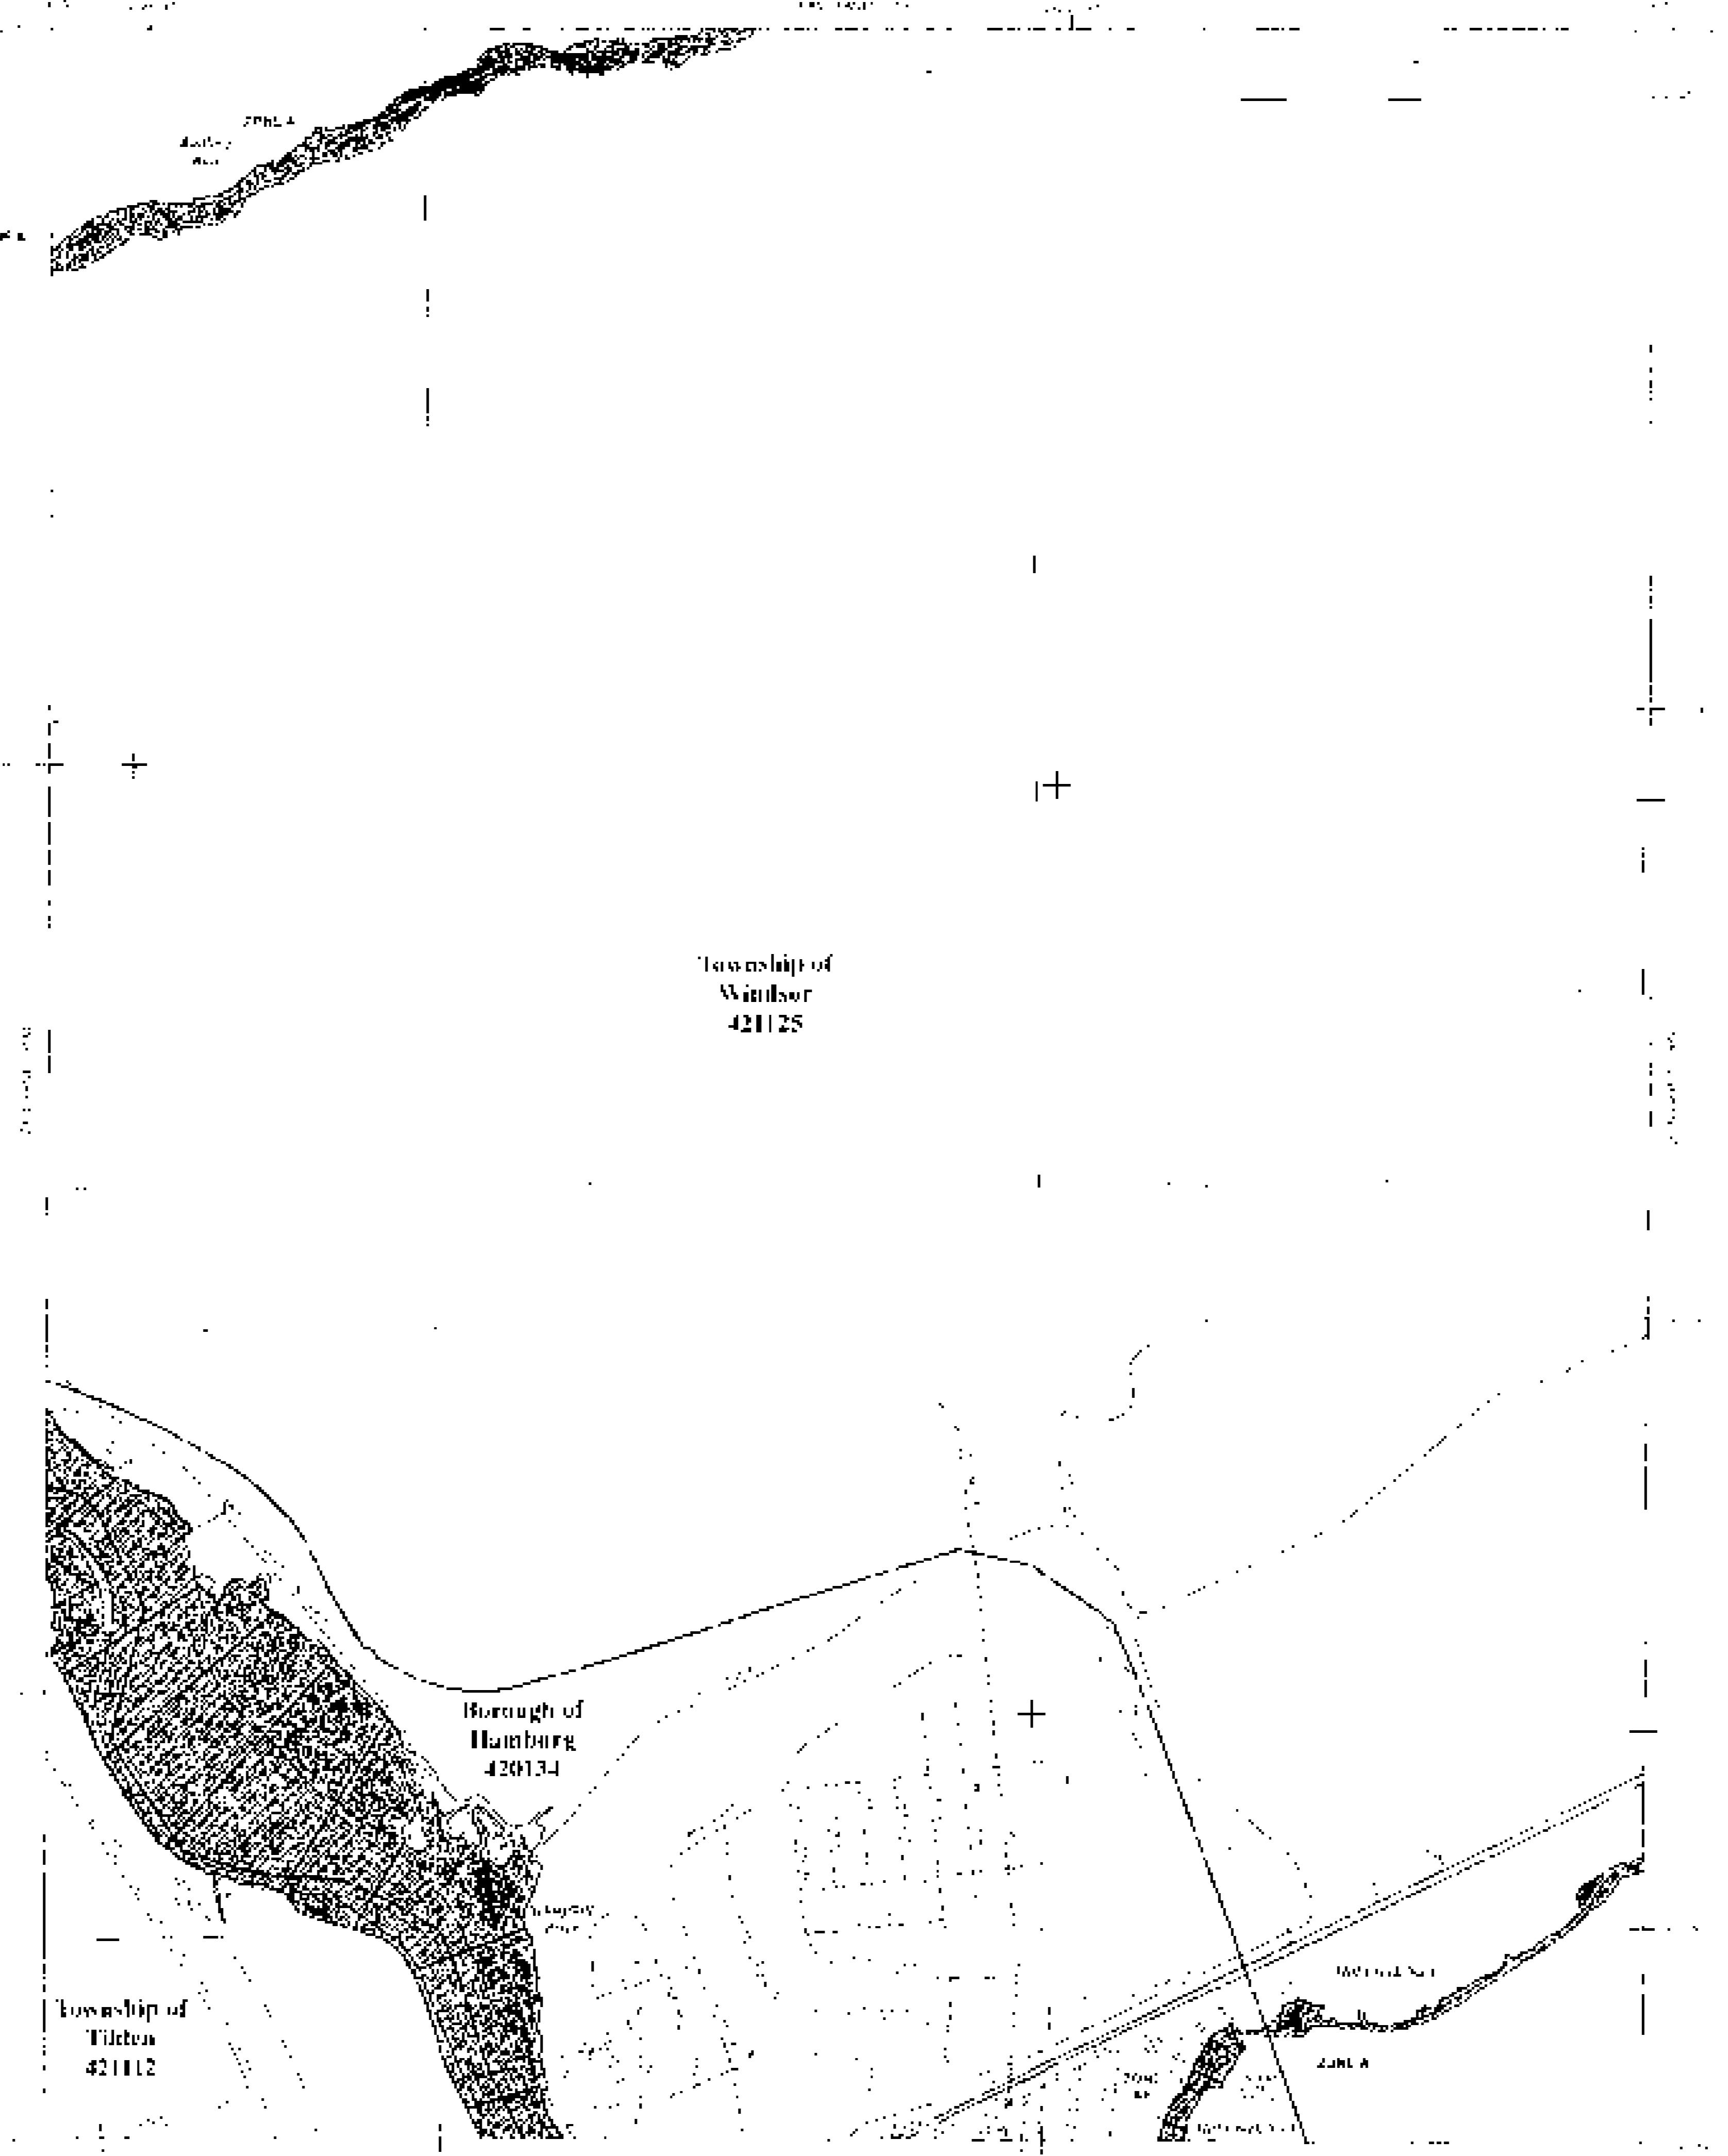

The impact of migration on the source country depends on a variety of factors, including the size of the migrant population, the nature of the migration, and the policies of the government. In some cases, migration can lead to a loss of skilled labor and brain drain, which can negatively affect the economy and society. In other cases, migration can lead to a transfer of wealth and resources from the source country to the destination country, which can benefit the source country in the long run.

Overall, migration is a complex issue that requires careful consideration and management. It is important to understand the reasons for migration, the impacts of migration, and the policies that can be put in place to address the challenges of migration. By doing so, we can ensure that migration is a positive force for both the source and destination countries.
